Engineered to Eliminate Biodiesel NOx Increase
Improves Cetane, Energy, Power
Compatible with Biodiesel Fuels From B5-B100

Enercat, formulato a base di nano molecole di cerio, agisce da catalizzatore in fase di combustione riducendo le emissioni nocive. Enercat utilizza la capacità del cerio di immagazzinare ossigeno per produrre una combustione più completa che permette di ridurre i consumi di carburante.

IMPROVES

fuel efficiency by 5-12 %

COMPATIBLE

with Euro 1-Euro V engines

EXTENSIVE

no-harms experience across many engines

NO

increase in ultra-fine particulate emissions

REDUCES

harmful emissions
engine deposits
overall engine maintenance cost

SYNERGISTIC

with DOC, CRT, DPF & SCR

ENERCAT

additised fuel continues to be within 590 specs
